

U.S. citizen. Applied Math / Data Science student building reliable data pipelines and analysis in Python and SQL.

Projects include a Treasury auction scraper (Selenium + BeautifulSoup) and an ML classifier on 337,000+ records.

UCSD JSOE IT technician: image and deploy 30+ systems/week and perform secure multi-pass data wiping on hundreds of devices.

SKILLS

Languages	Python, SQL
Python (Data/ML)	pandas, NumPy, scikit-learn, matplotlib, algorithms
Data Work	Data cleaning, feature engineering, classification, regression, cross-validation
Evaluation	Accuracy, precision/recall, AUC (when applicable)
Tools	Git, Jupyter, Linux/Bash, Excel (reporting), Web scraping (Selenium, BeautifulSoup), n8n (workflow au- tomation)
Databases	MySQL (joins, aggregation)

TECHNICAL EXPERIENCE

Student Computing Support Technician
Jacobs School of Engineering, UC San Diego

2023 — Present
San Diego, CA

- Imaged and deployed 30+ systems per week, including OS installs, driver setup, and required software configuration.
- Performed secure data sanitization on hundreds of machines using multi-pass overwrite procedures (3-pass), then prepared devices for reassignment.
- Diagnosed and repaired hardware and software issues across laptops, desktops, and peripherals in a production support environment.
- Maintained accurate inventory and service logs to support auditing, lifecycle tracking, and lab readiness.

n8n YouTube Automation Pipeline
Personal Project

2024 — Present
Remote

- Built an automated content pipeline in n8n integrating API calls, scheduled workflows, and file handling to generate short-form video outputs.
- Implemented modular steps for data ingestion, transformation, and publishing, with logging and failure handling for repeatable runs.
- Designed the workflow for iteration: parameterized inputs, test runs, and clear outputs to speed debugging and improvement.

Treasury Auction Scraper and Rate Tracker
Personal Project

2024 — Present
Remote

- Built a Python scraper for Treasury auction results using Selenium for JavaScript-rendered pages and BeautifulSoup for HTML parsing.
- Parsed and standardized auction tables into structured datasets for historical tracking and analysis.
- Exported cleaned outputs (CSV) and generated time-series plots to compare rate trends across maturities.
- Designed the pipeline to support scheduled runs and future alerting based on rate thresholds.

League of Legends Match Outcome Predictor
Personal Project

2023 — 2025
Remote

- Processed 337,000+ professional match records with 160+ attributes across multiple seasons.
- Built an end-to-end ML workflow in Python: preprocessing, feature engineering, train/test split, and evaluation.
- Trained a Random Forest classifier and evaluated performance with accuracy and confusion-matrix style diagnostics.
- Identified next steps: time-based splits/backtesting and calibration to reduce leakage risk.

EDUCATION

Bachelor of Science in Math and Applied Data science, *University of California, San Diego*
Andrew Ng Machine Learning Specialization (Coursera)

Expected Graduation Fall 2026
Final module in progress (Expected Dec 2025)

ACTIVITIES

Scuba Certified (Open Water)	Current
Rock Climbing	Current
Running and Hiking	Current
Sailing(Quests/Sabots)	Current
